

LEAD ORBIT

19-03-2026

OVERVIEW

The web app improves over spreadsheets by providing structured data management, intuitive UI, real-time filtering, dedicated lead views, and built-in analytics instead of manual row-based tracking . Also observed that traditional spreadsheets methods can be messy and the manual work in spreadsheets can lead to errors and inefficiency .

I understood that users needed better visualization of data through dashboards, identified the gap in having dedicated pages for detailed lead insights and in conclusion that a structured web-based solution would improve efficiency and usability.

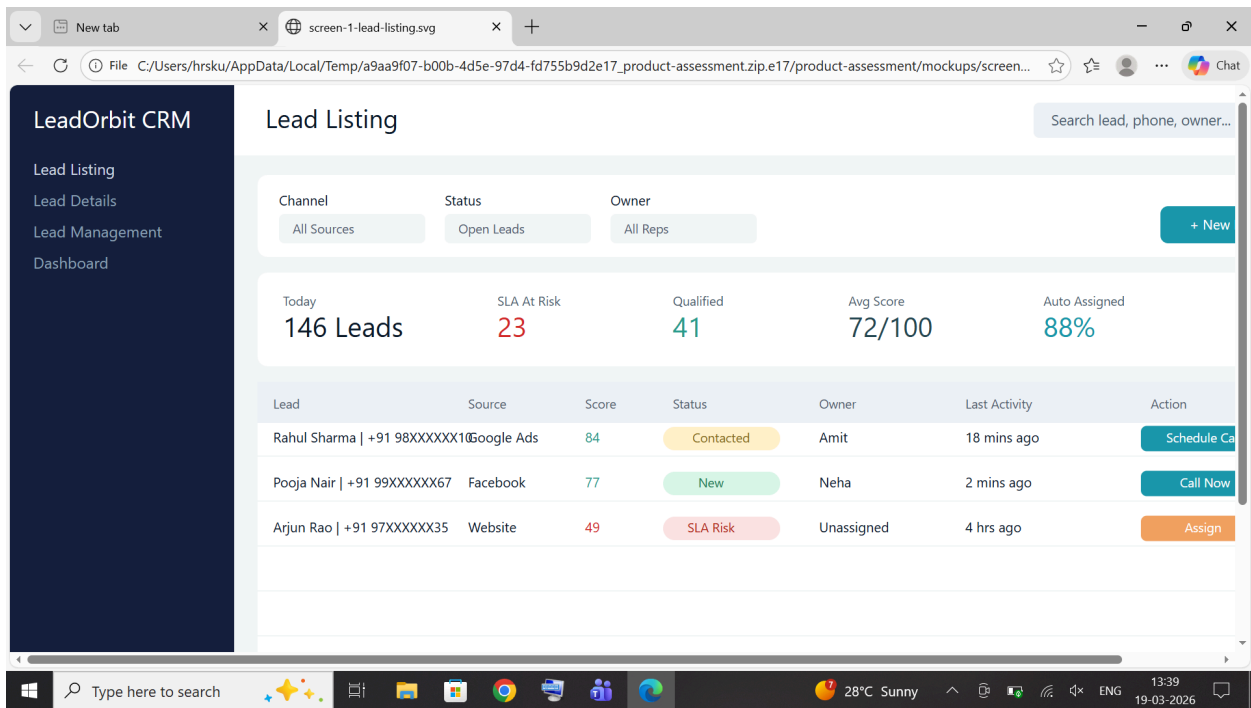

FEATURES

1. Lead profile management → Used to store and view complete details of each lead in one place.
2. Add lead form → Used to quickly input new lead information without errors.
Search functionality → Used to instantly find specific leads from a large dataset.
3. Lead details page → Used to access in-depth information and history of a lead.
4. Dashboard analytics → Used to monitor overall performance and key metrics. Status
5. tracking → Used to track the progress of leads through the sales pipeline.
Navigation between pages → Used to switch easily between dashboard, leads, and details views.

WIREFRAME / MOCKUP / PROTOTYPE

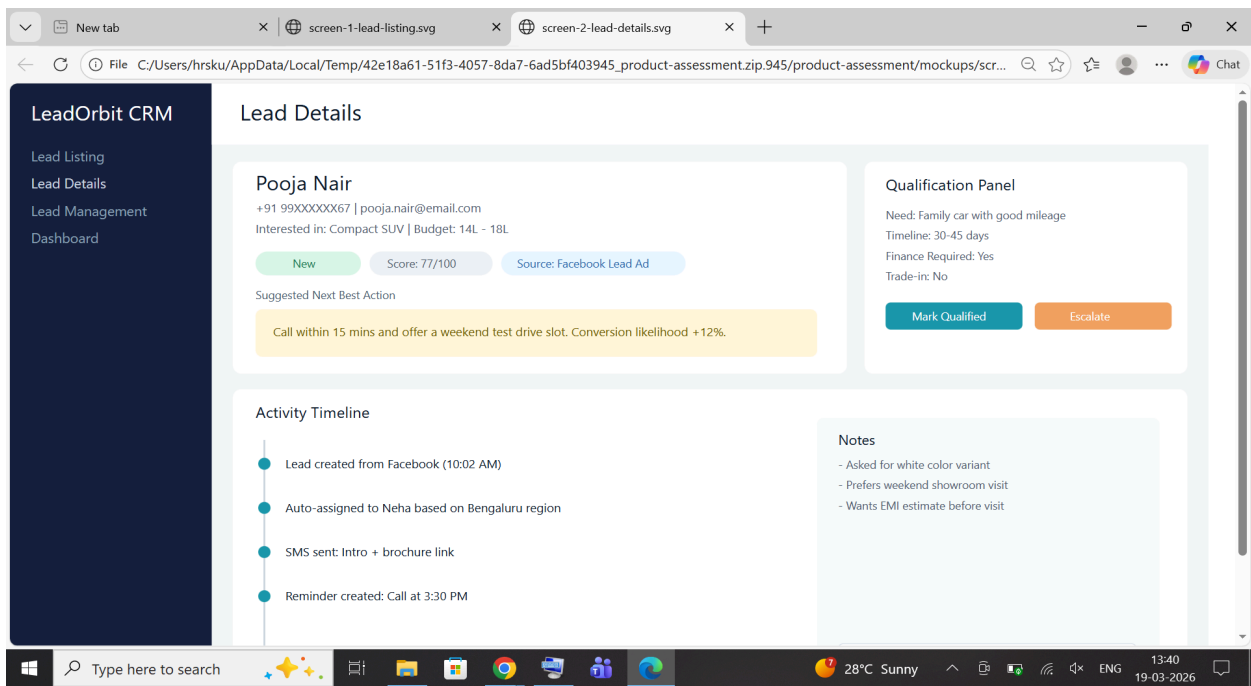

1. Lead Listing

Entry point for sales reps. Filter, prioritize, and take immediate action.

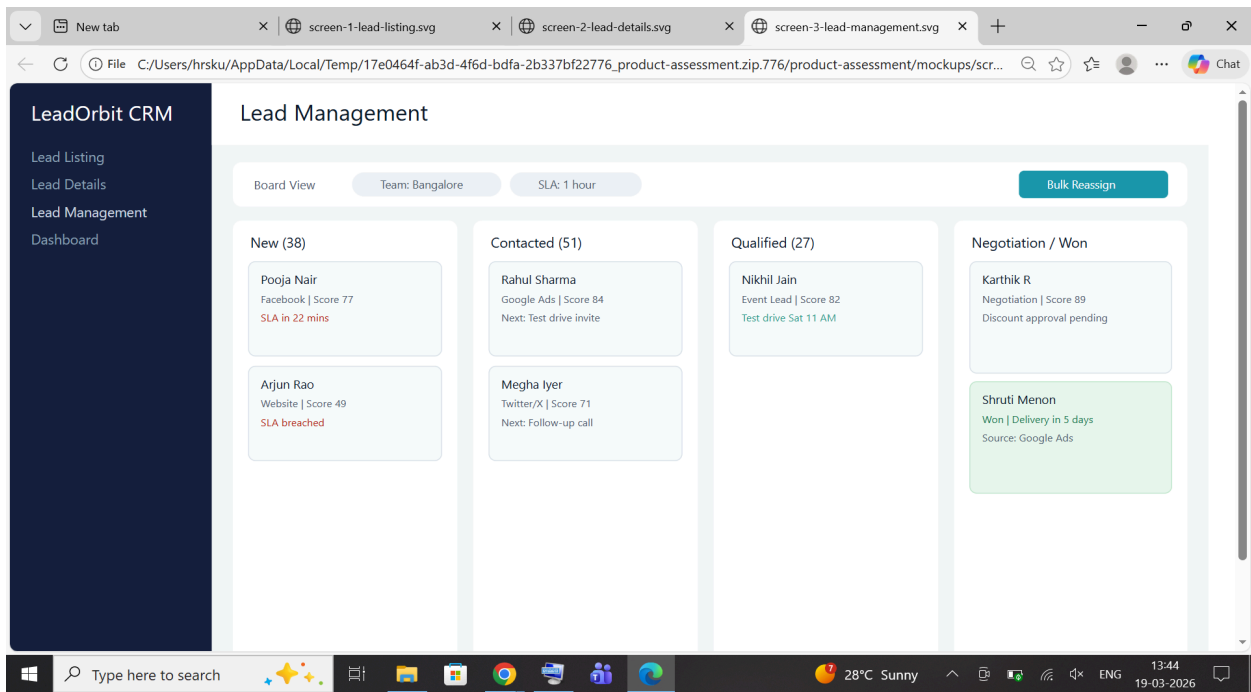

2. Lead Details
